

Final Project - Individual Reflection

1. What was the most difficult part of interpreting the original author logic?

The most difficult part was understanding how the whole system worked together. At first, I thought frontend development was mostly about designing the interface, but later I realized that every part of the design also needed to connect properly with the backend and database. It was also difficult because the original capstone project seemed outdated, and some parts of the ERD and system structure were unclear. Because of this, our group had to adjust and improve some parts of the logic and relationships in the system while recreating the module.

2. What technical challenges did you face during recreation?

One of the main challenges I faced was creating the frontend while making sure it would properly connect with the backend and database later. I worked on the frontend using HTML, CSS, and JavaScript, and I focused on making the interface simple, organized, and easy to use while properly displaying the patient table. Another challenge was debugging errors during testing because sometimes the frontend and backend would not connect correctly due to small mistakes in logic or file setup. Our group also experienced some difficulties in online collaboration, especially when using GitHub, because the files became messy at first and there were conflicts during dry testing. Thankfully, we used online resources and references to help solve these problems.

3. How would you improve this module further?

If given more time, we would improve the module by connecting the patient records with more related features and entities in the system. Right now, the module mainly focuses on the basic CRUD functions such as adding, viewing, updating, and deleting patient records. In the future, the system could be improved by connecting patients to services, appointments, medical history, or treatment records to make the module more useful and realistic. I would also improve the responsiveness and overall user experience of the website while still keeping the interface simple and easy to navigate.
